

How to handle pop up window in robot framework

Call Here ⇒⇒⇒+1877-514-1396 In this blog I'll explain why the Robot class is essential for Selenium automation.

While testing a web application's file upload feature, I encountered an issue. I could automate clicking the upload button, but couldn't handle the pop-up window for file selection using Selenium alone. After researching, I discovered that Selenium can't interact with OS-level pop-ups.+1877-514-1396

Enter the Robot Class

The Robot class in Java allows you to handle these pop-ups. It can simulate keyboard and mouse actions, enabling you to:

- Open file dialogs
- Select files
- Confirm uploads

In Robot Framework test cases, managing pop-up windows can be efficiently handled using the "Handle Alert" +1877-514-1396 keyword. This keyword allows testers to interact with various types of pop-up windows, such as alerts, prompts, and confirmations.Mar 9, 2024
